Art Unit: 3765

DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Rejections - 35 USC § 102

- 2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 3. Claims 1 and 10-12 are rejected under 35 U.S.C. 102(a) as being anticipated by Tanae et al (6487842).

Tanae teaches a false twist texturing apparatus (Figure 1) comprising a plurality of side by side processing stations (inherent of the apparatus, not shown; supported by Applicant's specification), each comprising a plurality of feed roll systems (21, 25, 27, 32, 34, 36), a primary heater (41) and cooling device (43) in a common plane, a false twist unit (31), a secondary heater (35), yarn guide tube (unlabeled, directly after feed roll 36), and a takeup device (51), a takeup module (50) mounting the takeup devices, and a processing module (30) mounting the false twist units, wherein the takeup and the processing modules joined to form a frame section arranged between a doffing aisle (to the right of 50, finished rolls 53 would be doffed from this area)

Application/Control Number: 10/717,840 Page 3

Art Unit: 3765

adjacent to the takeup module and a servicing aisle (A) adjacent to the processing module and below the common plane of the heater/cooling device, wherein the yarn being processed advances serially along the primary heater, the cooling device, the false twist unit, and the secondary heater, yarn guide tube, and to the takeup device, and further the yarn advancing from the false twist unity along the secondary heater and guide tube, and to the takeup device forms a generally U-shaped path.

Allowable Subject Matter

4. Claims 2-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fiedl (4395872), Wortmann et al (6209302), Jaschke et al (6430911), and Japanese Document (2000/355840) all teach what is well known in the art.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shaun R Hurley whose telephone number is (703) 605-1236. The examiner can normally be reached on Mon Fri, 6:30am 3:00pm, off every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John J Calvert can be reached on (703) 305-1025. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
